COORDINATING COMMITTEE

MEMORANDUM FROM THE

UNITED STATES DELEGATION

Concerning

ROLLING MILLS - ITEM 1305

References: COCOM Documents 3413.05/1 and 3413.05/2

The United States Delegation proposes the following redefinition:

"Metal rolling mills, and specialized controls, parts and accessories therefore, as follows:

"A. For the rolling of flat products (plates, sheet, strip, foil) the following:

"1. Having the work rolls supported by multiple back-uprolls or bearings;

"2. Taper mills;

"3. More than 3-high (including those which also permit 2-high operation) and possessing any of the following characteristics which in kind and/or in quality were not incorporated into similar mills which became operative before January 1, 1956:

(1) Closed loop electronic gauge controls;

(11) Contour control achieved by concurrent deforming of back-up rolls;

(111) Possessing work rolls having a diameter less than 10 inches;

(1V) Other features permitting the achievement of improved flatness characteristics.

"B. Designed for the rolling of refractory metals and alloys;

"C. Specialized controls, parts and accessories for the above mills."
